About

I am a software developer with a focus in web applications, front and back-end. I have a knack for troubleshooting and debugging and am not afraid to think outside the box to find solutions for tough problems. My background in fields outside of software gives me a leg up on my competition because of my eye for design and my experience in client-facing roles.

Experience

DU Coding Bootcamp
Boulder, CO

2022 – PRESENT

Developed mastery in full-stack web-development by creating new web-based applications weekly

Collaborated via Git with other developers in the program to create large-scale projects using free web APIs
